Predictive Services Discussion:

Troughing will deepen over the West Coast while ridging shifts farther east into the Plains. Further cooling is expected west of the Divide bringing temperatures around seasonal normals, and even 3 to 6 degrees below normal west of the Cascades. Meanwhile, temperatures over the Southern Plains and Gulf Coast will soar to 5 to 10 degrees above normal. Temperatures in the Lower Mississippi Valley and Southern Plains will continue to rise near to above 100°F. Breezy northerly offshore winds are likely to continue for the Gulf Coast states and breezy southerly winds of 15-25 mph will continue for west Texas. These conditions will keep low humidity in place that will continue to enhance fire potential.

Monsoon activity will continue to remain active for Arizona, Utah, and Colorado. It will likely remain dry over southeast California and Nevada due to increasing westerly flow. Increasing moisture and instability from the trough may bring scattered showers and thunderstorms to portions of the Northwest, northern Great Basin, and across the Rockies. Storms will be fast moving so there may be a mix of wet and dry storms, so an increase in fire potential will be possible with increased lightning activity. Increasing moisture from the trough will lead to very dry conditions becoming a bit less widespread over the northern/western Great Basin into California, though RH will still be in the 8-25% range for the driest areas. Westerly winds are expected to strengthen and become more widespread for California, Nevada, and into southwest Idaho and Wyoming keeping elevated to critical fire weather conditions in place
