Predictive Services Discussion:

Southwest flow is forecast to increase along the West Coast with breezy west to southwesterly winds continuing from the Columbia Basin into much of central and southern Idaho and Nevada. The winds will be strongest along the Sierra Front and eastern Nevada where relative humidity will fall to 3-15%, while humidity will be higher at 15-30% with temperatures about 10 degrees cooler than Monday in the Columbia Basin. Moderated conditions will continue west of the Cascade and Sierra Crests with temperatures near to below normal. The monsoon will continue to weaken in the Four Corners with isolated mixed wet and dry thunderstorms forecast in Arizona and much of the Rockies, with the greatest threat for new ignitions in western Montana and much of Wyoming.

Temperatures will cool slightly in the southern Plains but remain above normal amid relative humidity of 10-25%. Cooler temperatures closer to normal are forecast in the Lower Mississippi Valley and Deep South, but anomalously dry air is also forecast, as relative humidity falls to 25-35% in the afternoon. Meanwhile, a cool but dry airmass will spread across the Great Lakes, Ohio Valley, and Northeast, while seasonably cool conditions continue in Alaska.
