Predictive Services Discussion:

South to southwest winds of 15-30 mph with gusts of 30 to 50 mph amid relative humidity of 5-20% will develop across much of the Great Basin into western/central Wyoming today. Above normal temperatures are likely to continue in Montana and Wyoming with minimum RH below 25%, although winds will be lighter in Montana with fewer thunderstorms. Winds will be breezy across the Inland Northwest as well, with isolated mixed wet and dry thunderstorms creating the potential for new ignitions. However, showers are likely in the Cascades westward, with snow possible above 8,000 feet, along with much cooler temperatures and high humidity providing continued relief. Monsoon moisture will continue in Arizona and spread across much of eastern Utah, New Mexico west of the Divide, and Colorado for scattered to widespread wet thunderstorms.

Temperatures in the southern Plains will remain above normal with afternoon relative humidity as low as 10% and southerly winds of 12-20 mph and gusts 20-35. In addition, slightly increased moisture in central Texas will lead to isolated to scattered mixed wet and dry thunderstorms for likely new ignitions. In the Deep South, very dry conditions with relative humidity as low as 25% will continue. Dry air will continue to spread across the Appalachians and Ohio Valley, but temperatures are likely to remain below normal.
