Predictive Services Discussion:

The mid-level trough of low pressure which advanced through the Pacific Northwest and Northern Californian Friday into Saturday is expected to weaken and lift out of the northern Great Basin into the Northern Rockies Sunday into Sunday night. Gusty southwest winds at 15-25 mph with gusts up to 30 mph are forecast to persist over the eastern Great Basin, Colorado, Wyoming, and the western and northern Plains on Sunday. Relative humidity levels of 10-25 percent are forecast over eastern Montana, central and eastern Wyoming, southern Great Basin, the deserts of southern California, portions of the Southwest, and the western Plains.

Cool conditions and minimum humidity levels above 25 percent are expected across the Pacific Northwest, northern California, and the northern Great Basin. Monsoonal moisture is forecast to shift further eastward over along and east of the divide creating areas of showers and storms. Scattered mixed wet/dry storms are forecast over the northern Great Basin.

Temperatures will drop slightly across the Southern Plains but remain above normal. Minimum relative humidities will improve slightly over the High Plains but are still expected to drop into the teens. Above normal temperatures will spread north and east into the rest of the Plains and Mississippi Valley as an upper ridge of high pressure intensifies over the central US. Gusty south to southwest winds are forecast over the High Plains up into the Central Plains Sunday afternoon.
