Predictive Services Discussion:

Well above normal, record-setting temperatures will continue in the Southwest and southern California, with well above normal temperatures throughout the northern Intermountain West and much of the Plains. Minimum relative humidity will be 5-20% for much of the West, with minima of 15-25% on the Plains. Dry conditions will continue across the Midwest and much of the Mississippi Valley as well, where relative humidity will fall as low as 20%, although winds will be light. Winds in the West and Plains are likely to be light also, except for portions of Wyoming and Montana east of the Divide where westerly winds gusting to 35 mph are possible. Isolated, mainly dry, thunderstorms will develop over northeast California, the eastern Sierra, and central Nevada in the afternoon. Drier conditions are expected across much of the Appalachians and East Coast, except for lingering showers in eastern New England. Heavy rain is possible across the Florida Peninsula along a stalled cold front.
