Predictive Services Discussion:

Temperatures will remain above normal across the Intermountain West, with the greatest anomalies over the Southwest and Four Corners. Minimum relative humidity will remain low at 8-20% for the Great Basin, Southwest, central Rockies, and High Plains, but higher at 15-30% for California, the Inland Northwest, and northern Rockies. Breezy southwesterly winds will develop across much of the Great Basin into Wyoming and the West Slope creating elevated. Breezy south to southeasterly winds will develop across northeast Wyoming into eastern Montana, as well.

Breezy and dry northerly winds will develop in the Upper Mississippi Valley behind a dry cold front, with dry southwesterly winds ahead of the front in the Lower Great Lakes. Breezy southerly winds will also develop in central Texas and Oklahoma. Much of the US will remain dry today, with little to no precipitation forecast although a few light showers may move onto the northern California coast Friday night. A few showers are also possible in northern New England and along the east coast of Florida.
