Predictive Services Discussion:

The upper-level ridge will continue over the West, with the high's center moving into the Great Basin. Temperatures will be as much as 20 degrees above normal, with numerous daily records continuing, especially near and west of the Cascades and Sierra. Low minimum RH of 4-20% will continue as well, with poor overnight recovery of 10-30% for mid-slopes and ridges across the Intermountain West. Winds will be light, but a weak upper-level low moving into northern California is likely to produce isolated dry thunderstorms in the northern Sierra, northwest California, and southwest/south-central Oregon. While storms are expected to remain isolated and not nearly as prolific lightning producers as early this week, ignitions efficiency is expected to be high, with many new ignitions and a few emerging large fires possible. Isolated thunderstorms may continue overnight, mainly in southwest and central Oregon.

Limited moisture will move west into eastern Arizona with isolated mixed wet/dry thunderstorms possible along the Mogollon Rim and into much of New Mexico and southwest Colorado. While fuels conditions are not as dry, fuels have been drying quickly with the heat. A cold front will move through the eastern Great Lakes and Ohio Valley, but rainfall is expected to be scattered in the Ohio Valley. Farther south, widespread showers and thunderstorms will spread into the Southeast, but a sharp northern boundary of rainfall will continue, with mainly dry conditions in the Tennessee Valley and southern Appalachians.
