Predictive Services Discussion:

An upper-level low will move slowly into southern California, with scattered showers and isolated thunderstorms along the central Coast Ranges into the Sierra and central Nevada. Strong onshore flow will continue in southern California, with dry and breezy conditions in the Southwest. Above normal temperatures will continue in the Front Range onto the High Plains with minimum relative humidity of 8-25% along with locally breezy south winds. Relative humidity will be sharply lower across the Texas/Oklahoma panhandles tomorrow than previous days. Dry conditions with near normal temperatures and light winds will spread from the Northwest into the northern Great Basin and northern Rockies. Scattered showers will continue on the east slopes of the central Appalachians to the Carolinas. It will remain dry for the Great Lakes, northern New England, and Lower Ohio Valley, but moderation of relative humidity is likely to continue as minima remain above 30%, while scattered showers and thunderstorms are expected in the Mid/Upper Mississippi Valley.
