Predictive Services Discussion:

Critical conditions develop/expand across much of the Inland Northwest, portions of the northern Great Basin as well as parts of Montana, Wyoming and the northern Plains through the day as a fast-moving, strong and dry cold front sweeps eastward and emerges east of the Northern Rockies this evening. Of particular concern will be much of Wyoming, the Nebraska Panhandle and western Dakotas where fuels are driest. Strong/dry westerly winds gusting to 40 mph amid RH 12-20% expected early in the day for the Columbia Basin and Inland Northwest. Breezy/windy conditions and lowering RH expand eastward across portions of the northern Great Basin, Northern Rockies and northern Plains during the afternoon. Gusts to 50+ mph are likely along/east of the Divide in Montana and northern Wyoming. A few brief showers may cross the North Cascades, northern Idaho Panhandle, and northwest Montana. Lightning if any will be very isolated and confined to the north-central Washington/Canadian border region.

Strong high pressure aloft will bring dry and unseasonably warm/hot conditions to the Great Lakes, central/southern Plains, Colorado, and the Southwest. Weaker upper-level high pressure over California along with a weak closed low aloft that drifts inland will take the edge off the heat; however, gusty northerly winds to 30+ mph in wind prone areas of northern California will bring elevated conditions and moderate potential through tonight. In the east, weakening low pressure system over the central Appalachians with areas of mainly light to moderate rain slowly expanding into the Upper Ohio and Shenandoah Valleys, as well as the Mid-Atlantic. Scattered wetting rainfall anticipated for much of West Virginia and southeast Ohio. Elsewhere, scattered showers and thunderstorms will develop over Florida to the coastal areas of the Carolinas while a few showers and thunderstorms develop from the eastern Great Lakes to the Northeast.
