Predictive Services Discussion:

Strong southwesterly sustained winds of 20-40 mph gusting to 60 mph amid relative humidity of 10-20% will create critical conditions today across southern and eastern New Mexico into the southern High Plains. Breezy westerly winds are also expected across the Southeast as relative humidity falls into the teens but conditions will be mitigated by recent rainfall. Strong northwesterly winds are also forecast in the Great Lakes to the Mid-Atlantic, but homogeneous will be higher. An upper-level low will move into the western Great Basin today with widespread rain across the southern half of the West except New Mexico, with snow falling above 4,000 to 5,000 feet. Areas of heavy snow will also spread into Wyoming and western Nebraska tonight. Mild temperatures will continue across much of Alaska, with rain and snow in the southwest and snow across portions of the Interior.
