Predictive Services Discussion:

Widespread elevated to critical conditions are forecast today across much of the central and southern Plains into the western Mid-Mississippi Valley. South to southwest sustained winds of 15-30 mph with gusts 30-40 mph are forecast amid minimum relative humidity of 5-20%, lowest in the southern Plains. Breezy and dry northwesterly winds amid relative humidity of 15-30% will develop in the Southeast today, as well, but recent precipitation will mitigate conditions. However, elevated to critical conditions are expected across the southern half of Florida where little precipitation has fallen. A Pacific storm will continue moving through the Intermountain West, with the bulk of the precipitation from the Sierra through the Great Basin into the northern and central Rockies as heavy snow falls in the mountains. Breezy westerly winds are also likely in much of the Great Basin to the Southwest, west of the Divide, but high relative humidity and ongoing or recent precipitation will mitigate the conditions.
