Predictive Services Discussion:

A dry cold front will move through the central Plains tomorrow, with northwesterly winds of 20-30 mph and gusts to 45 mph behind the front. Ahead of the front, southwesterly winds of 15-25 mph with gusts 30-40 mph are forecast in the southern Plains to Mid-Mississippi Valley. Minimum relative humidity of 10-20% is forecast, creating widespread elevated to critical conditions. Widespread low relative humidity of 10-25% is also forecast from the Appalachians to the East Coast, but winds will be lighter except in the Piedmont and the Mid-Atlantic coast where west winds of 10-20 mph will create locally elevated conditions.

In the West, dry conditions will continue in the Southwest with single digit minimum relative humidity forecast for the Sonoran Desert into southern New Mexico and far West Texas. Another cold front will move through the northern half of the West, with widespread valley rain and mountain snow for the Northwest and northern Rockies, while scattered light precipitation spreads into northern California, the northern Great Basin, and central Rockies. However, breezy downslope westerly winds gusting to 50 mph are expected east of the Divide in central Montana. Generally dry conditions and slightly above normal temperatures will continue in Alaska, while breezy and dry trade winds are expected in Hawai'i.
