Predictive Services Discussion:

Breezy southerly sustained winds of 10-25 mph, with higher gusts, will occur across the Lower and Mid-Mississippi Valley to East Coast. However, an increase in relative humidity is expected, with values near or above 30%, although portions of Virginia into central Pennsylvania will be lower with elevated fire weather conditions. Dry and breezy westerly winds of 15-25 mph with gusts to 40 mph amid relative humidity of 8-20% will develop across the Southwest into West Texas creating elevated to critical conditions. A strong storm will move from the central Rockies into the central Plains, with widespread precipitation in the northern and central Rockies into the Mississippi Valley and Great Lakes. Mixed precipitation and snow are expected in the Rockies and northern periphery of the storm, while severe thunderstorms are possible from eastern Kansas into the Mid-Mississippi Valley. Light southeast trade winds will continue across Hawai'i with a few windward showers, mainly on the Big Island. Dry conditions are also expected across much of Alaska, aside from scattered light rain and snow showers along the southern and western coasts.
