

**Incident Management Situation Report
Tuesday, May 27, 2025 – 0730 MDT
National Preparedness Level 2**

National Fire Activity:

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (122 fires)
New large incidents:	4
Large fires contained:	2
Uncontained large fires:	8
CIMTs committed:	2
Type 1 IMTs committed:	0
NIMOs committed:	1

Nationally, there is one fire being managed under a strategy other than full suppression.
Uncontained large fires include only fires being managed under a full suppression strategy.

[Understanding the IMSR](#)

[IMSR Map](#)

This report will be posted Monday - Friday at 0730 Mountain Time unless significant activity occurs.

Active Incident Resource Summary

GACC	Incidents	Cumulative Acres	Crews	Engines	Helicopters	Total Personnel	Change in Personnel

Ten Year Average	Quantity
Fires (2015 – 2024 as of today)	20,346
Acres (2015 – 2024 as of today)	1,131,688

Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Above normal temperatures are forecast throughout the West, with very dry conditions and low minimum relative humidity of 3-15% continuing for the Mojave Desert, southern Great Basin, and Southwest, west of the Divide. Low relative humidity below 20% is also forecast for central California into much of the northern Intermountain West. Isolated mixed wet and dry thunderstorms will develop near and east of the Divide in the central and southern Rockies, with the greatest chance for new lightning ignitions in central New Mexico. A cold front will bring widespread showers and thunderstorms from central Texas into the Lower Mississippi Valley and the central and southern Appalachians. Isolated to scattered showers and thunderstorms will develop in the rest of the Southeast, including Florida. Much of the central and southern Plains into the Southeast, with heavy rain and areas of flooding expected in much of Oklahoma into the Lower Tennessee Valley. Dry conditions will persist from northern Minnesota into Upper Michigan and Maine, with minimum relative humidity of 20-30% but light winds. In Alaska, isolated thunderstorms will develop from the southwest Interior to the northeast Interior, while dry and breezy trade persist across Hawai'i.
